ASTRALUX ENVIRONMENTAL SOLUTIONS ACKNOWLEDGED FOR ENVIRONMENTAL STEWARDSHIP

(Boulder, CO – March 28, 2008) – [GenGreen™](#) has named Astralux Environmental Solutions (Astralux) as the Featured Business on the GenGreen Network (www.gengreen.com) in Colorado.

GenGreen chose Astralux for their outstanding efforts in green business practice and for their promotion of sustainable living through their energy efficiency and renewable energy services. The [Astralux Power Systems](#) group has emerged as a premier provider of solar energy solutions in the Colorado area.

GenGreen selects businesses that they feel set an example for their communities. They choose these companies to acknowledge them for their efforts in environmental stewardship. Being named one of the 'New Green Leaders' is a highly sought after title that GenGreen is pleased to give to Astralux.

"We are honored to be associated with GenGreen," says Jesse Malcomb, Director of Operations at Astralux. "We applaud their success in expanding the green movement through the wildly successful internet social networking industry."

Based in Boulder, Colorado, Astralux offers a variety of sustainability solutions, notably the Power Systems group offering solar energy design and integration. Colorado has become the "center of the solar system" with nation-leading solar energy rebates, strong local legislative support, and powerful "green" grassroots movements by organizations such as GenGreen.

Headquartered in Fort Collins, Colorado, GenGreen created its network to help people throughout the United States live sustainable lives by finding "green" companies, organizations and people on a local level. With a rapidly expanding member base in over 300 cities, GenGreen is indeed connecting the world to change the world.

About Astralux

Astralux, established in 1992, is a Boulder, Colorado-based engineering and research firm and was originally founded to research and develop opto-electronic materials and devices. The firm's research contracts with the U.S. Air Force, [U.S. Department of Energy](#) and others are directly related to advanced solar energy systems development and give Astralux unique and surpassing capabilities in the field. The Power Systems group was developed to commercialize these alternative energy technologies and deliver precisely designed and professionally installed solar energy systems to home and business owners.
